

Units are in stock and tested that will allow a system to be back in online with minimum downtime. Flownet certified technicians can install the door kit with minimum down time for your pump station.

The two piece door kit provides flexibility for mounting as the PLC controls can be mounted on the rear of the door or an existing back panel.

Panel Upgrade Retrofits provide an easy and affordable way to upgrade your controls and extend the life of your existing pump station. nConnect Remote Connectivity is Standard.

Multiple options are available to support existing auxiliary equipment. Packages can be customized to support existing auxiliary equipment.
